CHAPTER 1

Indices and tables

- genindex
- modindex
- search

class emailviews.views.SendEmailMixin

Base mixin for sending emails. Uses `django.core.mail.send_email` to send the email. By default, to construct an email we will use `django.template.loader.render_to_string` passing `email_subject_template` and `email_body_template` as paths to the templates.

class emailviews.views.ActivationEmailViewMixin

Provides methods for generating and validating activation_keys. Uses `django.core.signing.TimestampSigner` allowing activation keys to expire after certain period of time.

You have to implement 2 methods while subclassing this view:

`emailviews.views.ActivationEmailViewMixin.get_salt`

`emailviews.views.ActivationEmailViewMixin.get_max_age`

generate_activation_key (`value: str`) → `str`

Generates activation key via `django.core.signing.dumps`.

get_max_age()

Has to return time expressed in seconds after which activation_key expires.

get_request_root_url()

Generates root url of your website based on request. Example that you can use in your template:

```
{% root_url %}{% url 'activation' activation_key=activation_key %}
```

get_salt()

Has to return secret_key used to sign and validate values.

validate_activation_key (`key: str`) → `str`

Validates key using `django.core.signing.loads` If value is not validated (either time expires, or key is wrong) returns `None`.

A

ActivationEmailViewMixin (*class in emailviews.views*), 1

G

generate_activation_key() (*emailviews.views.ActivationEmailViewMixin method*), 1
get_max_age() (*emailviews.views.ActivationEmailViewMixin method*), 1
get_request_root_url() (*emailviews.views.ActivationEmailViewMixin method*), 1
get_salt() (*emailviews.views.ActivationEmailViewMixin method*), 1

S

SendEmailMixin (*class in emailviews.views*), 1

V

validate_activation_key() (*emailviews.views.ActivationEmailViewMixin method*), 1
